# Click the record circle in the bottom left

Success will look like this.

You can broadcast multiple feeds By just repeating the steps and adding Many blocks as you need within the Same session window.

Audio highjack controls the internal MacOS Sound settings also.

For my feeds, I use the built in line in and I purchased a small plug and play USB sound card for \$7 off amazon.

I leave the scanner volumes all the way up And set the block volumes to 50.

My feeds are very clean with no squelch.
